

## **Recyclable Information**

The Beata Clasp Company is committed to providing an environmentally friendly product. We proudly manufacture the Beata Clasp in the USA and it is 100% recyclable.

Products made in the USA eliminate the vast amount of fuel needed to transport the product overseas. The Beata Clasp is recyclable wherever number 7 plastics are recycled. In addition, the device can be collected and returned to the manufacturer where the material can be reprocessed into additional product. Devices that are reprocessed are safe and can reduce thousands of tons of waste from landfills. Credit towards future purchases will be given to facilities that return the product in bulk.

As the health care industry becomes increasingly committed to protecting the environment, the demand for recyclable medical products will increase. Hospitals who use environmentally friendly products will distinguish themselves in the community. Supply your next patient with recyclable products that will contribute to reuse and renewal of the earth's resources.
